

Akismet setup successfully

Setup

Simple Form allows you to setup forms with any kind of data (including file uploads) in 1 easy step:

1. Setup your form using the following code:

```
<form action="http://getsimpleform.com/messages?form_api_token=71f96a18dbec67fda7a65e295ce17c43" method="post">
  <!-- the redirect_to is optional, the form will redirect to the referrer on submission -->
  <input type='hidden' name='redirect_to' value='<the complete return url e.g. http://fooey.com/thank-you.html>' />
  <!-- all your input fields here.... -->
  <input type='text' name='test' />
  <input type='submit' value='Test form' />
</form>
```

2. Simpleform supports [Akismet](#) for spam prevention [Setup your simpleform Akismet key](#)
 - i. To use akismet, first [get an akismet key](#)
 - ii. Set it up using the link above
 - iii. Add an input/textarea element on which you want to check spam with a name '**message**' or '**content**'

```
<input name='message' type='text' />
OR
<input name='content' type='text' />
OR
<textarea name="message"></textarea>
OR
<textarea name="content"></textarea>
```

- iv. Now, every time a message is submitted, Simpleform will check if it is spam through akismet and notify you only if it isn't. However, the spam messages are still visible to you on the messages page but in a different section

Test the setup

1. Make a test form entry

Enter your name

Submit Test Message

2. Start tracking your form submissions from this url: http://getsimpleform.com/messages?api_token=a0555a990a370a8e40f5b4ae528d6387

Other Important information

- Whenever someone makes a new form entry you will get an **email notification** about it instantly
- You can submit the forms via ajax, checkout <http://blog.getsimpleform.com/2013/07/29/we-have-added-the-ability-to-submit-forms-through-ajax> for more information
- Your form entries are **not public** as long as you keep the Access API token private. Treat it like your password.
- Your two API tokens are
 1. Form API token: **71f96a18dbec67fda7a65e295ce17c43**
This is like your **public** key and its embedded in your form's 'action' attribute.
 2. Access API token: **a0555a990a370a8e40f5b4ae528d6387**
This is like your **private key**. You should **not** share this with anyone. This allows you to access all the data associated with your form.
